DUROTECH

DUROSHIELD

DuroShield is a water repellent /primer for concrete, masonry & mineral surfaces. It pro-tects building surfaces from the damaging effects of water with little effect on appearance.

PRINCIPLE CHARACTERISTICS & USES WATER REPELLENT

- Simple easy and safe application by brush roller or spray.
- No colour change on most surfaces, and no shine.
- Repels and resists water e.g. rain, sea spray, from penetrating concrete, grout, masonry, fibrous cement sheeting, brickwork, unglazed clay & concrete pavers & blocks, sand-lime bricks, sandstone, grouts, renders & plasters.
- Protects concrete against the effects of salt & water, e.g. concrete spalling, reo corrosion.
- Does not stop surfaces from 'breathing' as it is vapour permeable, e.g. releases moisture vapour from within a wall but won't let rain in, thereby allowing any damp to dry out.
- Deeply penetrates and chemically bonds to concrete & cement for extreme durability and UV stability.
- Keeps masonry surfaces cleaner by reducing discolouration from mould & algae & salts.
- Reduces efflorescence & surface staining by salts.
- Improves insulation properties of masonry by preventing water saturation.
- Water-based, solvent -free, extremely low VOC and non- toxic.

TECHNICAL INFORMATION

Appearance:	white, water - thin liquid, dries clear.
Viscosity:	<10 cP at 25^{0}C
Density:	0.99 at 20^{0}C
pH value:	<8
Coverage:	Depends greatly on surface absorption. Approximate coverage; Concrete: 2 to 4 m^2/litre Brickwork: 0.5 to 2.5 m^2/litre FC sheeting: 3 to 5 m^2/litre Stone (very porous) : 0.5 to 1.0 m^2/litre Stone (dense): 10 to 20 m^2/litre
Cure Time:	Dries quickly and is repellent upon drying, but allow 24 hours or more for full chemical cure.
Shelf Life & Storage :	6 months at 25^{0}C. Protect from frost & freezing.

MASONRY PRIMER

- Provides a waterproofing backup to topcoats.
- Extends the life of topcoats by resisting water and salt build-up behind the coating or membrane.
- For masonry priming under paints and coatings. Contact Durotech for advice.

ADDITIVE TO RENDER, BAGGING & CONCRETE

As an admixture to prefab, semi dry concrete, mortar or grout to reduce primary & secondary efflorescence.

PREPRATION

Remove any dust, loose surface material, laitance, previous coatings, sealers and contamination by mould, algae or oil and grease stains. For correct penetration ensure the surface is dry.

APPLICATION

Repellent: Do not apply if rain is expected. Stir contents. Apply by brush, roller or spray.Apply two coats, wet onto wet, flooding and saturating the surface. Do not let the surface dry between coats. Clean off any excess product that has not soaked in within 10 minutes. Some surfaces are extremely absorbent so repeat coats should be applied. Refer to Durotech MSDS prior to use.

Primer: Apply as above, and use only as a primer to absorbent or coarse finished masonry and stone surfaces such as blockwork, render, wood float finished concrete and sandstone. Do not use as a primer over clay brickwork, smooth dense concrete or mortar, and dense FC sheeting. Leave overnight to cure before applying coatings.

Mortar Additive: Premix 1 litre of DuroShield with gauging water and add to 100kg of dry sand and cement , i.e. about 1 litre of DuroShield in 50 litres of wet final mix.

Concrete Additive: Premix 15 litres with gauging water per cubic metre of final mix.

PRECAUTIONS

Not suitable for resisting hydrostatic pressure or for prolonged immersion. DuroShield is NOT a binder for powdery, low strength or weakly bound surfaces. Note surfaces must be absorbent and composed of mineral masonry materials that are mechanically stable. DuroShield will not seal joints or hairline cracks. The product is not recommended for dense materials such as granite, marble, limestone, glazed tiles or polished concrete.

Do not apply in hot windy conditions as this may limit penetration into the surface. Protect coated surfaces that are wet if rain begins during application. Take care of splashes or overspray onto window glass, glazed surfaces or other nearby surfaces. Wipe off with a wet cloth immediately or with turps.

CLEANUP: Cleanup tools with water or turps if product has recently dried.

SAFETY: Refer to MSDS. Hazards: Non-Hazardous (ref. NOHSC). Non-Poisonous (ref. SUSDP Australia). Not classified as a Dangerous Good (ref. IATA).
Use: Ensure adequate ventilation. Avoid contact with eyes and skin. Do not inhale gases/vapours/aerosols.

First Aid: Harmful if swallowed. If swallowed give several small portions of water. Seek medical advice. After contact with eyes rinse immediately with water for 10-15 minutes and seek medical advise.

Spill/Cleanup: Prevent material from entering sewers, drains & waterways.

Warranty: As the use of this material is beyond the manufacturer's control, liability is limited to replacement of the material if proved to be faulty.

The information provided in this data sheet is correct at the time of printing (albeit is subject to change at any time) and is intended to give a simple description of the product and its capabilities. In practice, the substrate, intended surface to be treated and environmental conditions vary widely, making it essential for the user to determine the products suitability for a particular application and to ensure that the product is not used beyond its physical limitations. If in doubt contact the manufacturer. The product will perform as described herein provided it is applied in accordance with the manufacturer's instructions as stated in this data sheet and provided that the building and installation is structurally sound and the application is carried out competently. Durotech terms and conditions of sale apply.
